Table of Contents

Introduction

G. A. Molander

Introduction	1
---------------------------	---

2.1 Reduction of Carbonyl Groups: Hydrogenation

N. Arai and T. Ohkuma

2.1 Reduction of Carbonyl Groups: Hydrogenation	9
2.1.1 Diastereoselective Hydrogenation of Carbonyl Groups	11
2.1.1.1 Diastereoselection Based on Steric Hindrance	11
2.1.1.2 Diastereoselection through Chelate Intermediates	14
2.1.2 Enantioselective Hydrogenation of Carbonyl Groups	16
2.1.2.1 Hydrogenation of Functionalized Ketones	16
2.1.2.1.1 Hydrogenation of β -Keto Esters	16
2.1.2.1.2 Hydrogenation of α -Substituted β -Keto Esters: Dynamic Kinetic Resolution ...	24
2.1.2.1.3 Hydrogenation of α -Keto Esters	26
2.1.2.1.4 Hydrogenation of Miscellaneous Substrates	28
2.1.2.2 Hydrogenation of Simple Ketones	30
2.1.2.2.1 Hydrogenation of Aromatic Ketones	30
2.1.2.2.2 Hydrogenation of Unsaturated Ketones (Alkenyl Alkyl Ketones)	46
2.1.2.2.3 Hydrogenation of Alkyl Ketones	49
2.1.2.2.4 Hydrogenation of Acylsilanes	52

2.2 Reduction of Carbonyl Groups: Transfer Hydrogenation, Hydrosilylation, Catalytic Hydroboration, and Reduction with Borohydrides, Aluminum Hydrides, or Boranes

M. Zaidlewicz and M. M. Pakulski

2.2 Reduction of Carbonyl Groups: Transfer Hydrogenation, Hydrosilylation, Catalytic Hydroboration, and Reduction with Borohydrides, Aluminum Hydrides, or Boranes	59
2.2.1 Transfer Hydrogenation	59
2.2.1.1 The Meerwein–Ponndorf–Verley Reduction of Ketones	60
2.2.1.1.1 Diastereoselective Reduction	60
2.2.1.1.2 Enantioselective Reduction	65
2.2.1.2 Asymmetric Transfer Hydrogenation of Ketones Catalyzed by Group 8 and 9 Metal Complexes	65

2.2.1.2.1	Reduction in Organic Solvents	65
2.2.1.2.2	Reduction in Water	78
2.2.1.2.3	Immobilized Catalysts	81
2.2.1.2.4	Biomimetic Reduction	82
2.2.2	Hydrosilylation of Ketones	84
2.2.2.1	Hydrosilylation Catalyzed by Rhodium Complexes	85
2.2.2.2	Titanium Hydride Catalyzed Hydrosilylation	89
2.2.2.3	Copper Hydride Catalyzed Hydrosilylation	90
2.2.2.4	Organocatalytic Hydrosilylation	93
2.2.2.4.1	Diastereoselective Reduction	93
2.2.2.4.2	Enantioselective Reduction	95
2.2.3	Asymmetric Catalytic Hydroboration	96
2.2.3.1	Hydroboration of Ketones Catalyzed by Oxazaborolidines	96
2.2.3.2	Hydroboration of Functionalized Ketones Catalyzed by Oxazaborolidines	102
2.2.3.3	Hydroboration of Ketones Catalyzed by (Aminoalkoxy)boranes and Aminoborates	106
2.2.4	Reduction with Borohydrides, Aluminum Hydrides, and Boranes	110
2.2.4.1	Diastereoselective Reduction of Ketones	110
2.2.4.2	Enantioselective Reduction of Aldehydes and Ketones	114
2.3	Enzymatic Reduction of Carbonyl Groups S. De Wildeman and N. Sereinig	
2.3	Enzymatic Reduction of Carbonyl Groups	133
2.3.1	Alcohol Dehydrogenases (Ketoreductases): The Enzymes for Carbonyl Reduction	134
2.3.1.1	Reduction of Ketones Mediated by Wild-Type Whole Cells, Engineered Whole Cells, Enzyme Preparations, and Immobilized Enzymes	135
2.3.1.1.1	Whole-Cell Reductions with Wild-Type Organisms	136
2.3.1.1.2	Enzymes from Genetically Engineered Organisms	140
2.3.1.1.3	Comparison of Enzyme Formulations	141
2.3.1.1.4	General Aspects of Working with Whole Cells and Enzyme Preparations	142
2.3.1.2	Availability of Alcohol Dehydrogenases	143
2.3.1.3	Selection of an Alcohol Dehydrogenase	143
2.3.2	Selection of Reaction Conditions	144
2.3.2.1	Cofactor Regeneration Systems	144
2.3.2.1.1	Cofactor Regeneration by Glucose Dehydrogenase	144
2.3.2.1.2	Cofactor Regeneration by Formate Dehydrogenase	146

2.3.2.1.3	Coupled Substrate for Cofactor Regeneration	147
2.3.2.1.4	Other Methods for Cofactor Regeneration	149
2.3.2.1.5	Comparison of Cofactor Regeneration Systems	150
2.3.2.1.6	Choice of Cofactor Regeneration Systems	150
2.3.2.2	Reaction Media for Enzymatic Ketone Reductions	151
2.3.2.3	Optimization of Reaction Conditions	152
2.3.3	Special Applications of Alcohol Dehydrogenases	154
2.3.4	Substrate Spectrum of Alcohol Dehydrogenases	155
2.3.4.1	Reduction of Aldehydes	156
2.3.4.2	Reduction of Aromatic Ketones	156
2.3.4.2.1	Acetophenones Substituted on the Aromatic Ring	156
2.3.4.2.2	Acetophenones Substituted on the Methyl Group	160
2.3.4.2.3	Diaryl Ketones	165
2.3.4.2.4	Other Aromatic Compounds	166
2.3.4.3	Dialkyl, Alkyl Alkenyl, and Alkyl Alkynyl Ketones	169
2.3.4.4	Cyclic Ketones	175
2.3.4.5	α -Keto and β -Keto Acid Derivatives	177
2.3.4.6	Diketones	183
2.3.4.7	Stereoselective Reactions on Chiral or Racemic Substrates	187
2.3.5	Outlook	200

2.4 Oxidative Deracemization

B. Stoltz, D. C. Ebner, and N. Park

2.4	Oxidative Deracemization	209
2.4.1	Deracemization via Oxidative Kinetic Resolution	209
2.4.1.1	Kinetic Resolution of Secondary Alcohols via Transfer Hydrogenation	210
2.4.1.2	Kinetic Resolution Using Molecular Oxygen as Terminal Oxidant	213
2.4.1.2.1	Oxidative Kinetic Resolution of Activated Secondary Alcohols	214
2.4.1.2.1.1	Using Palladium Catalysts	214
2.4.1.2.1.2	Using Ruthenium Catalysts	218
2.4.1.2.1.3	Using Iridium Catalysts	219
2.4.1.2.2	Oxidative Kinetic Resolution of α -Hydroxy Esters, Amides, Thioesters, and Phosphonates	220
2.4.1.3	Kinetic Resolution of Secondary Alcohols via Nitroxyl Radical Based Systems	224
2.4.1.3.1	Electrochemical Oxidation	224
2.4.1.3.2	Reoxidation by Bulk Oxidants	225
2.4.1.4	Kinetic Resolution of Secondary Alcohols Using Manganese–Salen Complexes	228

2.4.1.5	Biocatalytic Kinetic Resolution of Secondary Alcohols	231
2.4.1.6	Biocatalytic Kinetic Resolution of Amino Acids and Amines	233
2.4.2	Deracemization via Oxidation–Reduction Coupled Processes	236
2.4.2.1	Chemical and Chemo-Enzymatic Deracemization of Secondary Alcohols	236
2.4.2.2	Biocatalytic Deracemization of Secondary Alcohols	239
2.4.2.3	Deracemization of Amino Acids and Amines	242
2.4.2.3.1	Deracemization of α -Amino Acids	243
2.4.2.3.2	Deracemization of Primary, Secondary, and Tertiary Amines	244
2.5	Stereoselective Reduction of Imino Groups	
	L. Xu, X. Wu, and J. Xiao	
2.5	Stereoselective Reduction of Imino Groups	251
2.5.1	Asymmetric Hydrogenation of C=N Bonds with Metal Catalysts	252
2.5.1.1	Asymmetric Hydrogenation of Acyclic <i>N</i> -Arylimines	253
2.5.1.2	Asymmetric Hydrogenation of α -Imino Esters	259
2.5.1.3	Asymmetric Hydrogenation of Acyclic <i>N</i> -Alkylimines	261
2.5.1.4	Asymmetric Hydrogenation of Cyclic Imines	263
2.5.1.5	Asymmetric Hydrogenation of Miscellaneous C=N–X Compounds	266
2.5.2	Asymmetric Transfer Hydrogenation of C=N Bonds with Metal Catalysts	269
2.5.2.1	Asymmetric Transfer Hydrogenation of Imines with Metal Catalysts in Organic Media	269
2.5.2.2	Asymmetric Transfer Hydrogenation of Cyclic Imines with Metal Catalysts in Water	272
2.5.2.3	Asymmetric Transfer Hydrogenation of Quinolines with Metal Catalysts in Water	274
2.5.3	Asymmetric Transfer Hydrogenation of C=N Bonds with Organocatalysts	276
2.5.3.1	Organocatalytic Asymmetric Transfer Hydrogenation of Acyclic Imines	276
2.5.3.2	Organocatalytic Asymmetric Transfer Hydrogenation of α -Imino Esters	277
2.5.3.3	Organocatalytic Asymmetric Transfer Hydrogenation of Cyclic Imines	280
2.5.4	Hydroboration of C=N Bonds	281
2.5.5	Hydrosilylation of C=N Bonds	283
2.5.5.1	Asymmetric Hydrosilylation of Imines with Metal Catalysts	283
2.5.5.2	Asymmetric Hydrosilylation of Imines with Organocatalysts	285
2.5.6	Reductive Amination of C=O Bonds	287
2.5.6.1	Via Hydrogenation	288
2.5.6.1.1	Asymmetric Direct Reductive Amination of Ketones	288
2.5.6.1.2	Asymmetric Direct Reductive Amination of β -Keto Amides	291

2.5.6.1.3	Asymmetric Direct Reductive Amination of β -Keto Esters	292
2.5.6.2	Via Transfer Hydrogenation with Metal Catalysts	293
2.5.6.2.1	Asymmetric Direct Reductive Amination of Ketones with Ammonium Formate	293
2.5.6.3	Via Transfer Hydrogenation with Organocatalysts	295
2.5.6.3.1	Asymmetric Direct Reductive Amination of Ketones with Hantzsch Esters	295
2.5.6.3.2	Asymmetric Direct Reductive Amination of Aldehydes	297
2.5.6.4	Via Hydroboration	299
2.5.6.4.1	Direct Reductive Amination with Sodium Triacetoxyborohydride	299
2.5.6.5	Via Hydrosilylation	301
2.5.6.5.1	Asymmetric Direct Reductive Amination of β -Hydroxy Ketones	301
2.5.6.6	Via Biocatalysts	302
2.5.6.6.1	Asymmetric Direct Reductive Amination of Ketones with Ammonium Formate	303

2.6 Epoxidation and Aziridination of Carbonyl Groups and Imines

V. K. Aggarwal, E. M. McGarrigle, and M. A. Shaw

2.6	Epoxidation and Aziridination of Carbonyl Groups and Imines	311
2.6.1	Epoxidation of Carbonyl Compounds	311
2.6.1.1	Addition of Sulfur Ylides	311
2.6.1.1.1	Catalytic Sulfur Ylide Epoxidations	313
2.6.1.1.2	Stoichiometric Sulfur Ylide Epoxidations	317
2.6.1.2	Addition of Ylides Other than Sulfur Ylides	321
2.6.1.2.1	Arsonium Ylides	321
2.6.1.2.2	Telluronium Ylides	321
2.6.1.2.3	Ammonium Ylides	322
2.6.1.3	Addition of Heteroatom-Substituted Anions to Carbonyl Compounds (Excluding the Darzens Reaction)	323
2.6.1.3.1	Epoxidation with α -Halo Sulfonyl Compounds	324
2.6.1.3.2	Epoxidation with α -Halo Sulfinyl Compounds	326
2.6.1.4	Addition of Diazo Compounds to Carbonyl Compounds	327
2.6.2	Aziridination of Carbonyl Compounds	331
2.6.2.1	Aziridination with Guanidinium Ylides	331
2.6.3	Aziridination of Imines	332
2.6.3.1	Addition of Sulfur Ylides	332
2.6.3.1.1	Addition of Achiral Ylides to Achiral Imines	332
2.6.3.1.2	Addition of Achiral Ylides to Chiral Imines	335
2.6.3.1.3	Addition of Chiral Ylides to Achiral Imines	336
2.6.3.2	Addition of Ylides Other than Sulfur Ylides	338

2.6.3.2.1	Synthesis of Aziridines by Addition of Ammonium Ylides to Imines	338
2.6.3.3	Addition of Diazo Compounds to Imines	339
2.6.3.3.1	Lewis Acid Activation of the Imine	339
2.6.3.3.2	Brønsted Acid Activation of the Imine	341
2.6.3.4	Addition of Heteroatom-Substituted Anions to Imines (Excluding the Darzens Reaction)	342
2.6.3.4.1	Synthesis of Propargylic Aziridines by Addition of Allenylzinc Compounds to Imines	342
2.7	Alkylation of Carbonyl and Imino Groups D. J. Ramón and M. Yus	
2.7	Alkylation of Carbonyl and Imino Groups	349
2.7.1	Diastereoselective Addition	349
2.7.1.1	Addition to Chiral Aldehydes	349
2.7.1.1.1	Alkylation of Aldehydes with a Stereogenic Center at the α -Position	349
2.7.1.1.2	Alkylation of Aldehydes with a Stereogenic Center at the β -Position	356
2.7.1.1.3	Alkylation of Aldehydes with a Stereogenic Element at Other Positions	356
2.7.1.1.4	Alkylation Using the Darzens Reaction	359
2.7.1.2	Addition to Chiral Aldimines	359
2.7.1.2.1	Alkylation of Imines with Stereogenic Elements at the N-Substituent	359
2.7.1.2.2	Alkylation of Imines with Stereogenic Elements at the C-Substituent	363
2.7.1.2.3	Alkylation Using the Darzens Reaction with Imines with Stereogenic Elements at the N-Substituent	364
2.7.1.3	Addition to Chiral Ketones	364
2.7.1.3.1	Using Cyclic Ketones	364
2.7.1.3.2	Using Acyclic Ketones	365
2.7.1.4	Addition to Chiral Keto Imines	368
2.7.1.5	Addition of Chiral Nucleophiles	369
2.7.1.5.1	Using Chiral Organometallics and Aldehydes	369
2.7.1.5.2	Using the Darzens Reaction with Aldehydes	371
2.7.1.5.3	Using Chiral Organometallics and Ketones	373
2.7.2	Enantioselective Addition	374
2.7.2.1	Modulated Reactions	374
2.7.2.1.1	Using Aldehydes	374
2.7.2.1.2	Using Aldimines	378
2.7.2.1.3	Using Ketone Derivatives	380
2.7.2.2	Catalytic Reactions	382

2.7.2.2.1	Using Achiral Aldehydes and Amino Alcohols as Ligands	382
2.7.2.2.2	Using Achiral Aldehydes and Diamine Derivatives as Ligands	385
2.7.2.2.3	Using Achiral Aldehydes and Diol Derivatives as Ligands	388
2.7.2.2.4	Using Achiral Ketones	391
2.7.2.2.5	Using the Darzens Reaction	393

2.8 Allylation of Carbonyl and Imino Groups

A. Buitrago Santanilla and J. L. Leighton

2.8	Allylation of Carbonyl and Imino Groups	401
2.8.1	Enantioselective Allylation of Aldehydes	403
2.8.1.1	Allylation Using Chiral Allylmetal Reagents	403
2.8.1.1.1	Using Chiral Allylborane and Allylboronate Reagents	403
2.8.1.1.2	Using Chiral Allyltitanium Reagents	408
2.8.1.1.3	Using Chiral Allylsilane Reagents	410
2.8.1.2	Allylation Using Achiral Allyl Sources with Chiral Catalysts	412
2.8.1.2.1	Using Chiral Lewis Base Catalysts with Allyl- and Crotyltrichlorosilane Reagents	413
2.8.1.2.2	Using Chiral Iridium Catalysts with Allyl Acetates	414
2.8.2	Enantioselective Allylation of Ketones	416
2.8.2.1	Allylation Using Chiral Allylmetal Reagents	416
2.8.2.1.1	Using Chiral Allylborane and Allylboronate Reagents	416
2.8.2.1.2	Using Chiral Allylsilane Reagents	418
2.8.2.2	Allylation Using Achiral Allyl Sources with Chiral Catalysts	419
2.8.2.2.1	Using Chiral Silver Catalysts with Allylsilane Reagents	420
2.8.2.2.2	Using Chiral Diol Catalysts with Allylboronate Reagents	421
2.8.3	Enantioselective Allylation of Aldimines	423
2.8.3.1	Allylation Using Chiral Imines	423
2.8.3.1.1	Using Chiral Imines with Allylindium Reagents	424
2.8.3.1.2	Using Chiral Imines with Allylzinc Reagents	425
2.8.3.2	Allylation Using Chiral Allylmetal Reagents	426
2.8.3.2.1	Using Chiral Allylsilane Reagents	426
2.8.3.2.2	Using Chiral Allylboronate Reagents	430
2.8.3.3	Allylation Using Achiral Allyl Sources with Chiral Catalysts	432
2.8.3.3.1	Using Chiral Sulfoxide Catalysts with Allyl- and Crotyltrichlorosilane Reagents	432
2.8.3.3.2	Using Chiral Palladium Catalysts with Allylsilane Reagents	433
2.8.3.3.3	Using Chiral Catalysts with Allylindium Reagents	435
2.8.3.3.4	Using Chiral Diol Catalysts with Allylboronate Reagents	437
2.8.4	Enantioselective Allylation of Ketimines	439

2.8.4.1	Allylation Using Chiral Imines	439
2.8.4.1.1	Using Chiral Imines with Allyl Grignard Reagents	439
2.8.4.1.2	Using Chiral Imines with Allylzinc Reagents	440
2.8.4.2	Allylation Using Chiral Allylmetal Reagents	441
2.8.4.2.1	Using Chiral Allylsilane Reagents	442
2.9	Arylation and Alkenylation of Carbonyl and Imino Groups M. C. Kauffman and P. J. Walsh	
2.9	Arylation and Alkenylation of Carbonyl and Imino Groups	449
2.9.1	Arylation of Carbonyl and Imino Groups	449
2.9.1.1	Arylation of Aldehydes	449
2.9.1.1.1	Aryl Additions Using Aryl Sources Based on Zinc	450
2.9.1.1.2	Aryl Additions Using Aryl Sources Based on Boron	455
2.9.1.1.3	Aryl Additions Using Haloarenes	458
2.9.1.2	Arylation of Ketones	466
2.9.1.2.1	Diphenylzinc Additions	466
2.9.1.2.2	Aryl Additions with Organoaluminum Reagents	469
2.9.1.3	Arylation of Imines	471
2.9.1.3.1	Arylation of Imines with Arylboronic Acids and Arylboroxins	471
2.9.2	Alkenylation of Carbonyl and Imino Groups	475
2.9.2.1	Alkenylation of Aldehydes	475
2.9.2.1.1	Alkenylation with Organozinc Reagents through Hydroboration–Transmetalation of Alkynes	475
2.9.2.1.2	Alkenylation with Boronic Acids	480
2.9.2.1.3	Copper-Catalyzed Additions of Alkenyl(trimethoxy)silanes	480
2.9.2.1.4	Chromium-Catalyzed Alkenylation (Nozaki–Hiyama–Kishi Reaction)	482
2.9.2.1.5	Reductive Coupling of Aldehydes and Alkynes	483
2.9.2.2	Alkenylation of Ketones	484
2.9.2.2.1	Enantioselective Addition of Alkenylzinc Reagents	485
2.9.2.2.2	Enantioselective Addition of Alkenylaluminum Reagents	488
2.9.2.3	Alkenylation of Imines	488
2.9.2.3.1	Rhodium-Catalyzed Coupling of Acetylene	489
2.9.2.3.2	Iridium-Catalyzed Coupling of Alkynes	489
2.9.2.3.3	Rhodium-Catalyzed Addition of Alkenyltrifluoroborates	490

2.10	Alkynylation of Carbonyl and Imino Groups	
2.10.1	Enantioselective Addition of Acetylide Nucleophiles to Carbonyl Compounds E. M. Carreira and D. E. Frantz	
2.10.1	Enantioselective Addition of Acetylide Nucleophiles to Carbonyl Compounds	497
2.10.1.1	Enantioselective Addition of Terminal Alkynes to Aliphatic Aldehydes via Zinc(II) Salts	498
2.10.1.1.1	Stoichiometric Zinc(II)-Mediated Enantioselective Alkynylations	499
2.10.1.1.2	Catalytic, Asymmetric Additions of Alkynes to Aliphatic Aldehydes via Zinc(II) Salts	502
2.10.1.2	Catalytic Enantioselective Addition of Terminal Alkynes to Aromatic Aldehydes	505
2.10.1.3	Enantioselective Addition of Terminal Alkynes to Ketones	507
2.10.1.3.1	Enantioselective Addition of Terminal Alkynes to α -Oxo Esters	508
2.10.1.3.2	Enantioselective Addition of Terminal Alkynes to Unactivated Ketones	511
2.10.2	Enantioselective Addition of Metal Alkynylides to Imino Groups E. M. Carreira and P. Aschwanden	
2.10.2	Enantioselective Addition of Metal Alkynylides to Imino Groups	517
2.11	Hydrocyanation, Cyanosilylation, and Hydrophosphonylation of Carbonyl and Imino Groups E. Bergin	
2.11	Hydrocyanation, Cyanosilylation, and Hydrophosphonylation of Carbonyl and Imino Groups	531
2.11.1	Hydrocyanation of Carbonyl and Imino Groups	531
2.11.1.1	Addition to Carbonyls	532
2.11.1.1.1	Using Chiral Metal Catalysts	532
2.11.1.1.1.1	Using a Vanadium–Salalen Catalyst and Acetone Cyanohydrin	532
2.11.1.1.1.2	Using a Dimeric Vanadium–Salen Catalyst with Potassium Cyanide	533
2.11.1.1.2	Using Organocatalysts	535
2.11.1.1.2.1	Using a Dipeptide Catalyst	535
2.11.1.1.3	Using Enzymes	536
2.11.1.1.3.1	Using an (<i>R</i>)-Oxynitrilase under Microaqueous Conditions	537
2.11.1.1.3.2	Using an (<i>S</i>)-Oxynitrilase from <i>Manihot esculenta</i> (Cassava)	540
2.11.1.1.3.3	Using an (<i>S</i>)-Oxynitrilase from <i>Sorghum bicolor</i> Shoots	541

2.11.1.2	Addition to Imines (Strecker Reaction)	542
2.11.1.2.1	Using Chiral Metal Catalysts	543
2.11.1.2.1.1	Using an Aluminum–Salen Catalyst	543
2.11.1.2.1.2	Using Gadolinium and a Glucose-Derived Chiral Ligand	544
2.11.1.2.1.3	Using a Binuclear Zirconium–1,1'-Bi-2-naphthol Catalyst	545
2.11.1.2.2	Using Organocatalysts	547
2.11.1.2.2.1	Using a Thiourea Catalyst	547
2.11.1.2.2.2	Using a Quaternary Ammonium Salt as a Phase-Transfer Catalyst	549
2.11.1.2.2.3	Using a Chiral 1,1'-Bi-2-naphthol Phosphate	550
2.11.2	Cyanosilylation of Carbonyl and Imino Groups	551
2.11.2.1	Addition to Carbonyls	552
2.11.2.1.1	Using Chiral Metal Catalysts	552
2.11.2.1.1.1	Using a Chiral Ruthenium Catalyst and Lithium Carbonate	552
2.11.2.1.1.2	Using an (<i>S</i>)-3,3'-Bis[(dialkylamino)methyl]-1,1'-bi-2-naphthol/ Dimethylaluminum Chloride System	553
2.11.2.1.1.3	Using Gadolinium and a Glucose-Derived Chiral Ligand	555
2.11.2.1.1.4	Using a Synthetic Peptide and Aluminum	556
2.11.2.1.2	Using Organocatalysts	557
2.11.2.1.2.1	Using a Thiourea Catalyst	557
2.11.2.1.2.2	Using an Amino Acid Salt	558
2.11.2.2	Addition to Imines (Strecker Reaction)	559
2.11.2.2.1	Using Chiral Metal Catalysts	560
2.11.2.2.1.1	Using a Cinchonine–2,2'-Biphenol–Titanium Catalyst System	560
2.11.2.2.1.2	Using a Titanium and <i>N</i> -Salicyl- β -amino Alcohol System	562
2.11.2.2.1.3	Using Gadolinium and a Glucose-Derived Chiral Ligand	563
2.11.2.2.2	Using Organocatalysts	565
2.11.2.2.2.1	Using a Thiourea Catalyst	565
2.11.2.2.2.2	Using a Chiral <i>N,N'</i> -Dioxide for Three-Component Strecker Reactions	566
2.11.2.3	Addition to N-Heterocycles (Reisert Reaction)	567
2.11.2.3.1	Using Aluminum and a 1,1'-Bi-2-naphthol Bis(phosphine oxide) Ligand	567
2.11.3	Hydrophosphonylation of Carbonyl and Imino Groups	570
2.11.3.1	Addition to Aldehydes	570
2.11.3.1.1	Using Chiral Metal Catalysts	570
2.11.3.1.1.1	Using an Aluminum–Salalen Catalyst	571
2.11.3.1.1.2	Using an Aluminum–Schiff Base Catalyst	572
2.11.3.1.1.3	Using a Titanium Bifunctional Mixed Catalyst	573
2.11.3.2	Addition to Imines	574

2.11.3.2.1	Using Chiral Metal Catalysts	574
2.11.3.2.1.1	Using an Aluminum–Salalen Catalyst	575
2.11.3.2.1.2	Using an Aluminum–Bis(quinolinato) Catalyst	576
2.11.3.2.2	Using Organocatalysts	578
2.11.3.2.2.1	Using a Thiourea–Schiff Base Catalyst	578
2.11.3.2.2.2	Using a Cinchona Alkaloid	580
2.12	Asymmetric Mukaiyama Aldol Reaction L. Liu, D. Wang, and C.-J. Li	
2.12	Asymmetric Mukaiyama Aldol Reaction	585
2.12.1	Asymmetric Mukaiyama Aldol Reaction Using Chiral Aldehydes or Chiral Silyl Enol Ethers	599
2.12.1.1	Reactions with Chiral Aldehydes	599
2.12.1.2	Reactions with Chiral Silyl Enol Ethers	601
2.12.2	Chiral Ligand/Metal Complex Catalysis of the Mukaiyama Aldol Reaction	602
2.12.2.1	Reactions with Chiral Titanium Catalysts	602
2.12.2.2	Reactions with Chiral Zirconium Catalysts	603
2.12.2.3	Reactions with Chiral Boron Catalysts	603
2.12.2.4	Reactions with Chiral Copper Catalysts	605
2.12.2.5	Reactions with Chiral Tin Catalysts	606
2.12.2.6	Reactions with Chiral Scandium Catalysts	607
2.12.2.7	Reaction with a Chiral Silver Catalyst	608
2.12.3	Organocatalysis of the Mukaiyama Aldol Reaction	609
2.12.3.1	Lewis Base Catalyzed Reactions	609
2.12.3.2	Brønsted Acid Catalyzed Reactions	611
2.12.3.3	Reactions Catalyzed by Hydrogen-Bonding Molecules	611
2.12.4	Asymmetric Mukaiyama Aldol Reaction in Aqueous Media	612
2.12.4.1	Reactions Using Chiral Metal Trifluoromethanesulfonate Complexes	612
2.12.4.2	Reactions Using Chiral Iron Catalysts	614
2.12.5	Asymmetric Vinylogous Mukaiyama Aldol Reaction	615
2.12.5.1	Reactions Using Chiral Copper Catalysts	615
2.12.5.2	Reactions Using a Lewis Base	617

2.13	Direct Aldol Reactions S. M. Yliniemelä-Sipari and P. M. Pihko	
2.13	Direct Aldol Reactions	621
2.13.1	Direct Diastereoselective Aldol Reactions	622
2.13.1.1	Reactions Using Ketone Donors	622
2.13.1.2	Reactions Using Other Donors	625
2.13.2	Direct Enantioselective Aldol Reactions	628
2.13.2.1	Catalyzed Reactions of Enolates	628
2.13.2.1.1	Reactions Using Methyl Ketone Donors	628
2.13.2.1.1.1	Reactions Catalyzed by Chiral Metal Complexes	628
2.13.2.1.2	Reactions Using Methylene Ketone Donors	634
2.13.2.1.2.1	Reactions Catalyzed by a Titanium Complex	634
2.13.2.1.3	Reactions Using Other Ketone Donors	635
2.13.2.1.3.1	Reactions Catalyzed by Chiral Metal Complexes	635
2.13.2.1.4	Reactions Using Ester Donors	639
2.13.2.1.4.1	Reactions of Ethyl Diazoacetate Catalyzed by a Magnesium Complex	640
2.13.2.1.4.2	Reactions of a Glycine Schiff Base Catalyzed by a Chiral Quaternary Ammonium Salt	641
2.13.2.1.5	Reactions Using Other Donors	642
2.13.2.1.5.1	Reactions of Thioamides Catalyzed by a Copper Catalyst	642
2.13.2.1.5.2	Reactions of <i>N</i> -Propanoylthiazolidinethiones Catalyzed by a Nickel Complex	644
2.13.2.2	Catalyzed Reactions of Enamines	646
2.13.2.2.1	Reactions Using Ketone Donors	647
2.13.2.2.1.1	Reactions Catalyzed by Proline	647
2.13.2.2.1.2	Reactions Catalyzed by Proline Derivatives	650
2.13.2.2.1.3	Reactions Catalyzed by Other Amine Organocatalysts	652
2.13.2.2.2	Reactions Using Aldehyde Donors	656
2.13.2.2.2.1	Reactions Catalyzed by Proline	656
2.13.2.2.2.2	Reactions Catalyzed by a Proline–Surfactant Organocatalyst	659
2.13.2.2.2.3	Reactions Catalyzed by an Axially Chiral Amino Sulfonamide	661
2.13.2.3	Nitroaldol Reactions	661
2.13.2.3.1	Reactions Catalyzed by Chiral Lanthanum Complexes	662
2.13.2.3.2	Reactions Catalyzed by a Chiral Zinc(II) Complex	665
2.13.2.3.3	Reactions Catalyzed by a Chiral Copper(II) Complex	668
2.13.2.3.4	Reactions Catalyzed by Organocatalysts	669

2.14	Enzymatic Direct Aldol Additions P. Clapés and W.-D. Fessner	
2.14	Enzymatic Direct Aldol Additions	677
2.14.1	Aldol Addition of Dihydroxyacetone Phosphate to Aldehydes	678
2.14.1.1	Methods of Dihydroxyacetone Phosphate Synthesis	679
2.14.1.1.1	Dihydroxyacetone Phosphate from Chemical Synthesis	679
2.14.1.1.2	Dihydroxyacetone Phosphate from D-Fructose 1,6-Bisphosphate	681
2.14.1.1.3	Dihydroxyacetone Phosphate from Sucrose via “Artificial Metabolism”	682
2.14.1.1.4	Dihydroxyacetone Phosphate from Dihydroxyacetone	685
2.14.1.1.5	Dihydroxyacetone Phosphate from Glycerol and Analogues	688
2.14.1.1.6	In Situ Generation of Dihydroxyacetone Phosphate Mimics from Dihydroxyacetone	690
2.14.1.2	Aldol Addition of Dihydroxyacetone Phosphate to Aliphatic and Haloaliphatic Aldehydes	692
2.14.1.3	Aldol Addition of Dihydroxyacetone Phosphate to Hydroxy-Containing Aldehydes	693
2.14.1.4	Aldol Addition of Dihydroxyacetone Phosphate to Thiol-Containing Aldehydes	699
2.14.1.5	Aldol Addition of Dihydroxyacetone Phosphate to Nitrogen-Containing Aldehydes	701
2.14.1.6	Aldol Addition of Dihydroxyacetone Phosphate to Dialdehydes (“Tandem” Aldolization)	709
2.14.1.7	Aldol Addition of Dihydroxyacetone Phosphate to Other Aldehydes	710
2.14.1.8	Aldol Addition of Dihydroxyacetone Phosphate Analogues to Aldehydes	711
2.14.2	Aldol Addition of 1-Hydroxyalkan-2-ones to Aldehydes	712
2.14.3	Transfer of a Hydroxyacetyl Moiety to Aldehydes	715
2.14.4	Aldol Addition of Pyruvate to Aldehydes	717
2.14.4.1	Aldol Addition of Pyruvate to <i>N</i> -Acetyl-D-mannosamine and Analogues	718
2.14.4.2	Aldol Addition of Pyruvate to D-Arabinose and Analogues	721
2.14.4.3	Aldol Addition of Pyruvate to Aldehydes	722
2.14.5	Aldol Addition of Glycine to Aldehydes	724
2.14.6	Self- and Cross-Aldol Reactions of Acetaldehyde	727
2.14.6.1	Aldol Addition of Acetaldehyde, Acetone, and Fluoroacetone to Aldehydes	727
2.14.6.2	Sequential Two-Step Aldol Additions of Acetaldehyde to Aldehydes	728
2.14.7	Self- and Cross-Aldol Reactions of Glycolaldehyde	729

2.15	Asymmetric Morita–Baylis–Hillman Reaction and Its Aza Analogue G. Masson and J. Zhu	
<hr/>		
2.15	Asymmetric Morita–Baylis–Hillman Reaction and Its Aza Analogue	735
2.15.1	Nucleophilic Chiral Amine Catalysis	738
2.15.1.1	Use of Cinchona Alkaloid Based Catalysts	739
2.15.1.2	Use of 1,1'-Bi-2-naphthylamine- and 1,1'-Bi-2-naphthol-Based Bifunctional Catalysts	750
2.15.1.3	Use of Proline-Based Catalysts	753
2.15.1.3.1	Proline-Catalyzed Morita–Baylis–Hillman Reactions	753
2.15.1.3.2	Proline-Catalyzed Aza-Morita–Baylis–Hillman Reaction	759
2.15.2	Combination of Chiral Acid and Achiral Lewis Base	762
2.15.2.1	Use of Chiral Lewis Acids	762
2.15.2.2	Use of Chiral Brønsted Acids	764
2.15.2.2.1	Use of Chiral Thioureas	764
2.15.2.2.2	Use of 1,1'-Bi-2-naphthol	769
2.15.3	Phosphine Catalysis	770
2.15.3.1	Chiral Tertiary Phosphine Catalysis	770
2.15.3.2	Bifunctional Chiral Phosphines	772
2.15.4	Reaction in Chiral Ionic Liquids	778
2.15.5	Summary and Outlook	779
2.16	Mannich Reaction N. Z. Burns and E. N. Jacobsen	
<hr/>		
2.16	Mannich Reaction	785
2.16.1	Synthesis of β -Amino Ester and β -Amino Amide Products	785
2.16.1.1	Additions to Aldimines	785
2.16.1.1.1	Zirconium(IV)–Bis(1,1'-bi-2-naphthol) Catalysis	785
2.16.1.1.2	Thiourea Hydrogen-Bond Catalysis	786
2.16.1.2	Additions to Aldimines and Ketimines	788
2.16.1.2.1	Addition of Ester Enolates to <i>N</i> -(<i>tert</i> -Butylsulfinyl)imines	788
2.16.1.3	Additions to Ketimines	789
2.16.1.3.1	Copper(I)–Phosphine Catalysis	789
2.16.1.3.2	Chiral Silicon Lewis Acid Promoted Addition	791
2.16.2	Synthesis of β -Amino Ketone Products	792
2.16.2.1	Unsubstituted Additions	792
2.16.2.1.1	Silver-Catalyzed Additions of Enol Ethers	792

2.16.2.2	<i>syn</i> -Selective Additions	793
2.16.2.2.1	Amino Acid Catalyzed Reactions	793
2.16.2.2.2	Yttrium-Catalyzed Reaction of α -Hydroxy Ketones	797
2.16.2.3	<i>anti</i> -Selective Additions	798
2.16.2.3.1	Designed Amino Acid Catalysis	798
2.16.2.3.2	Proline-Catalyzed <i>anti</i> -Selective Mannich Reactions of Cyclic Imines	800
2.16.2.3.3	Brønsted Acid Catalyzed <i>anti</i> -Selective Mannich Reaction	801
2.16.2.3.4	Synthesis of <i>anti</i> -1,2-Amino Alcohols	802
2.16.3	Addition of Malonates and β -Keto Esters	803
2.16.3.1	Thiourea-Functionalized Cinchona Alkaloid Catalysis	803
2.16.3.2	Cinchona Alkaloid Derived Phase-Transfer Catalysis	805
2.16.3.3	Phosphoric Acid/Metal Phosphate Catalysis	806
2.16.3.4	Metal Catalysis	809
2.16.3.4.1	Lithium Binaphtholate Salt Catalysis	809
2.16.3.4.2	Cationic Palladium–Aqua Catalysis	810
2.16.4	Additions of Aldehydes	811
2.16.4.1	Acetaldehyde as Nucleophile	811
2.16.4.2	<i>syn</i> -Selective Additions	813
2.16.4.3	<i>anti</i> -Selective Additions	815
2.16.4.4	Additions to Special Imines	817
2.16.4.4.1	Addition to Formyl Imines	817
2.16.4.4.2	Addition to Ketimines	818
2.16.5	Vinylogous Mannich Reaction	819
2.16.5.1	<i>anti</i> -Selective Addition of Siloxyfurans	819
2.16.5.2	<i>syn</i> -Selective Vinylogous Mannich Reactions	821
2.16.5.3	Brønsted Acid Catalyzed Mannich Reaction of Acyclic Silyl Dienolates	822
2.16.6	Nitro-Mannich Reaction	824
2.16.6.1	<i>syn</i> -Selective and Unsubstituted Nitro-Mannich Reactions	824
2.16.6.2	<i>anti</i> -Selective Nitro-Mannich Reactions	825
2.16.6.3	Reactions Giving Highly Substituted Products	826
2.16.7	Synthesis of 1,2-Diamines	827
2.16.7.1	Synthesis of <i>syn</i> -1,2-Diamines	827
2.16.7.2	Synthesis with Switchable Selectivity	828
2.16.8	Additions to Nitrogen-Containing Heterocycles	830
2.16.8.1	Addition to Isoquinolines	830
2.16.8.2	Addition to β -Carbolines	831

2.17	Asymmetric Benzoin and Stetter Reactions D. A. DiRocco and T. Rovis	
<hr/>		
2.17	Asymmetric Benzoin and Stetter Reactions	835
2.17.1	Asymmetric Intermolecular Benzoin Reactions of Aryl Aldehydes	838
2.17.1.1	Homodimerization of Aryl Aldehydes Catalyzed by N-Heterocyclic Carbenes	838
2.17.1.2	Homodimerization of Aryl Aldehydes by Enzyme Catalysis	839
2.17.1.3	Heterodimerization of Aryl Aldehydes by Enzyme Catalysis	840
2.17.1.4	Heterodimerization of Aryl Aldehydes Catalyzed by Metallophosphites	841
2.17.1.5	Aldehyde–Imine Cross Coupling Catalyzed by N-Heterocyclic Carbenes	843
2.17.2	Asymmetric Intramolecular Benzoin Reactions	844
2.17.2.1	Aldehyde–Ketone Crossed Benzoin Reactions Catalyzed by N-Heterocyclic Carbenes	844
2.17.3	Asymmetric Intramolecular Stetter Reactions Catalyzed by N-Heterocyclic Carbenes	848
2.17.3.1	Asymmetric Intramolecular Stetter Reaction of Aryl Aldehydes	848
2.17.3.2	Asymmetric Intramolecular Stetter Reaction of Aliphatic Aldehydes	851
2.17.3.3	Formation of Quaternary Stereocenters	852
2.17.3.4	Desymmetrization of Cyclohexadienones	854
2.17.4	Asymmetric Intermolecular Stetter Reactions Catalyzed by N-Heterocyclic Carbenes	855
2.17.4.1	Reactions of Aryl Aldehydes with 1,3-Diarylprop-2-en-1-ones	855
2.17.4.2	Reactions of Glyoxamides with Alkylidenemalonates	856
2.17.4.3	Reactions of Hetaryl Aldehydes with Arylmethylenemalonates	858
2.17.4.4	Reactions of Hetaryl Aldehydes with Nitroalkenes	859
2.17.5	Asymmetric Intermolecular Acylation of α,β -Unsaturated Amides Catalyzed by Metallophosphites	860
2.18	Asymmetric Synthesis of Spiroketal, Bisspiroketal, and Spiroaminals R. G. Carter and D. L. Kuiper	
<hr/>		
2.18	Asymmetric Synthesis of Spiroketal, Bisspiroketal, and Spiroaminals	863
2.18.1	Spiroketal	864
2.18.1.1	5,5-Spiroketal	864
2.18.1.1.1	Tandem Oxidative Deprotection/Cyclization toward Norhalichondrin	864
2.18.1.2	5,6-Spiroketal	866
2.18.1.2.1	Heteroatom Diels–Alder Approach to Berkelic Acid	866
2.18.1.2.2	Tandem Aromatic Addition to Aldehyde/Ketalization toward Berkelic Acid	868
2.18.1.2.3	Acidic Conditions/Aprotic Solvent toward Pectenotoxin	869

2.18.1.2.4	2,3-Dichloro-5,6-dicyanobenzo-1,4-quinone-Mediated Deprotection Approach to Pectenotoxin-2	870
2.18.1.2.5	Anionic Cyclization toward Pectenotoxin	870
2.18.1.2.6	Spirodiepoxyde Ring Opening toward Pectenotoxin	871
2.18.1.2.7	Acid-Mediated Michael Addition toward Calyculin	872
2.18.1.2.8	Heterogeneous Acidic Cyclization toward Rubromycin	873
2.18.1.2.9	Pummerer-Type Michael Addition toward Rubromycin	874
2.18.1.2.10	Baeyer–Villiger Method for Spiroketal Formation	875
2.18.1.3	6,6-Spiroketals	876
2.18.1.3.1	Heteroatom Diels–Alder/Ketal Reorganization Strategy to Monensin	876
2.18.1.3.2	Heteroatom Diels–Alder Approach toward Reveromycin	877
2.18.1.3.3	Acid-Catalyzed, Protic Solvent Spiroketalization toward Spirofungin	879
2.18.1.3.4	Tethering Restriction To Control Spiroketalization toward Spirofungin	880
2.18.1.3.5	Anionic Cyclization toward Spirofungin	880
2.18.1.3.6	Tandem Sulfone Alkylation/Sulfinic Acid Extrusion toward Milbemycin	881
2.18.1.3.7	Acid-Catalyzed, Protic Solvent Spiroketalization toward Milbemycin	882
2.18.1.3.8	Exploration into Hydrogen Bonding and Acid Selection in the Control of Spiroketalization toward Spongistatin/Altohyrtin	882
2.18.1.3.9	Protic Acid Promoted Michael Addition toward Spongistatin/Altohyrtin	884
2.18.1.3.10	Iodoetherification toward Spongistatin/Altohyrtin	885
2.18.1.3.11	Ring-Closing Metathesis toward Aigialospirol	886
2.18.1.3.12	Reagent-Controlled Opening of Enol Ether Epoxides toward Spiroketals	887
2.18.2	Bisspiroketals	888
2.18.2.1	5,5,6-Bisspiroketals	889
2.18.2.1.1	Radical-Based Oxidative Cyclization toward Spirolides	889
2.18.2.2	6,5,6-Bisspiroketals	891
2.18.2.2.1	Use of Neighboring-Group Effects in Bisspiroketal Formation toward Pinnatoxin	891
2.18.2.2.2	Base-Catalyzed Michael Addition toward Pinnatoxin	892
2.18.2.2.3	Utility of Kinetic and Thermodynamic Conditions toward Azaspiracid	893
2.18.2.2.4	Acid-Catalyzed, Protic Solvent Bisspiroketalization toward Azaspiracid	896
2.18.2.2.5	Utility of Hydrogen Bonding in Bisspiroketalization toward Azaspiracid	897
2.18.2.2.6	Acid-Catalyzed, Protic Solvent Bisspiroketalization toward Azaspiracid	898
2.18.2.2.7	Acid-Mediated Heteroatom Michael Approach toward Azaspiracid	899
2.18.2.2.8	Tandem Iodoetherification/Lewis Acid Catalyzed Cyclization toward Azaspiracid	900
2.18.2.3	6,6,5-Bisspiroketals	901
2.18.2.3.1	Acid-Catalyzed Cyclization of Allenyl Enol Ethers toward Salinomycin	901

2.18.3	Spiroaminals	903
2.18.3.1	5,6-Spiroaminals	903
2.18.3.1.1	Tandem Azide Hydrogenation/Spiroaminal Formation toward Azaspiracid	903
2.18.3.1.2	Steric Effects in Spiroaminal Formation toward Azaspiracid	905
2.18.3.1.3	Lewis Acid Mediated Spiroaminal Formation toward Azaspiracid	906
2.18.3.1.4	Tandem Staudinger/Aza-Wittig Strategy toward Azaspiracid	907
2.18.3.1.5	Iodolactonization toward Spiroaminals	907
2.18.3.2	6,6-Spiroaminals	908
2.18.3.2.1	Acid-Catalyzed, Protic Solvent Spiroaminal Formation toward Sangliferin	908
2.18.3.2.2	Acid-Catalyzed Spiroaminal Formation toward Sangliferin	908
